

Urinary Silicone Foley Catheters

FIONIAVET 100 % silicone urinary 2 ways Foley catheters, for long term use.

This silicone self-retaining Foley catheter is used in applications where long term catheterization is required: (draining the bladder failing to empty, managing urinary incontinence). It is also used to irrigate the bladder or extract a sample of urine. Silicone material has a good bio-compatibility. Compared to latex, silicone is non-allergenic, has superior resistance to kinking. Silicone is therefore suitable for long term placement (up to 7 days) and reduces the risk of urethritis.

- Smooth surface avoiding urethral irritation
- Smooth rounded tip and lateral, atraumatic eyes
- Balloon to be inflated, maintain the catheter in place
- Balloon volume: 1,5 ml for 6 Fr, 2 ml for 8 Fr, 3 ml for 10 Fr
- Radiopaque line
- Stylet wire for introduction
- Urine drainage funnel
- Inflation connector with one-way valve
- Single packed sterile, polybag of 10 pcs
