

Sting Free Skin Barrier

Pure Silicone protection... Sometimes, the skin needs a little help.

Usually the skin provides an excellent barrier but occasionally a little help is required. We have used next generation silicone technology to protect skin from the damaging effects of body waste, enzymes and adhesives.

Trio™ Sting Free Skin Barrier has a **moisture Vapour Transmission Rate (MVTR)** similar **to skin**. This means that it does not affect the natural transmission of moisture vapour through the skin and does not interfere with the healing process when used to protect excoriated or damaged skin.

The silent spray, available in 50ml or 200ml (for larger areas of use), are designed to deliver a quiet spray action so as to avoid distress to the animal – the spray can be used at any angle. The all-silicone, *Sting Free* formulation and spray head design, create an even spray action with no clogging or blocking of the spray head.
